Question 1

Not yet
answered

RNNs assume that the output at each time step is independent of the previous outputs.

- ☐ True
- ☒ False

Question 2

Not yet
answered

Which of the following is NOT a typical application of RNNs?

- ☒ a. Image Segmentation
- ☐ b. Machine Translation
- ☐ c. Text generation
- ☐ d. Signal processing

[Clear my choice](#)

Question 3

Not yet
answered

The vanishing gradient problem can make it difficult to train deep RNNs.

- ☒ True
- ☐ False

Question 4

Not yet
answered

Which of the following best describes the main advantage of RNNs over traditional deep learning networks?

- ☐ a. They can process only image data
- ☒ b. They consider sequential information through memory of previous inputs
- ☐ c. They require less training data

[Clear my choice](#)

Question 5

Not yet
answered

What is the role of the “forget gate” in an LSTM cell?

- ☐ a. It stores all past inputs for future use
- ☒ b. It removes information that is no longer useful
- ☐ c. It randomly drops information to reduce overfitting
